

## PARADIGMA

The first contactless pick and place platform

Contactless manipulation  
of a die after pick up

Contactless manipulation,  
from wafer to package

No more contact defects  
Higher productivity

Semiautomatic operation  
mode

Perfect for small  
production needs

Large customisation options

Built specifically for your  
needs

Touchless Automation **Paradigma** is the first contactless pick and place platform in the world.

The platform can perform simple pick and place operations, as well as complex inspection and sorting tasks.

This platform is ideal for small series of high end components such as photon sensors, diodes, MEMS, ...

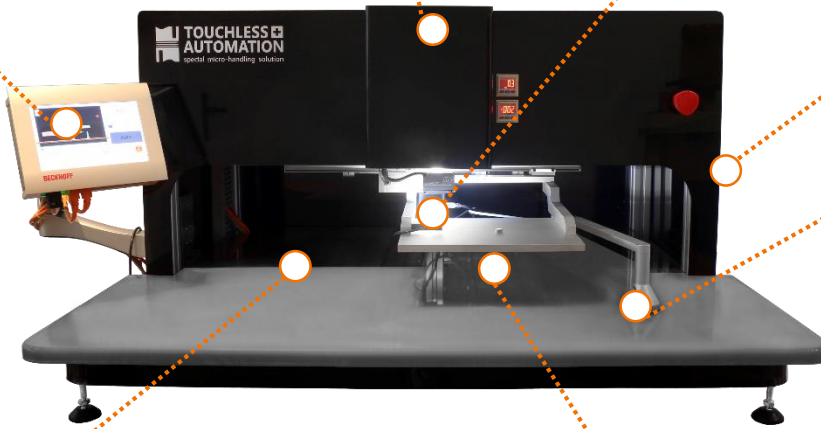

## Features & Options

- Optional microscope unit
- Optical guides available

- Fully contactless pick and place
- 240x240 mm working area

- Simple HMI
- Easy access to process parameters

- Premium materials
- Fully customisable
- Cleanroom compatible

- Manual operativity
- Joystick controlled linear axis available

- Pick up from waffle, Jedec tray
- No need for pre-existing facilities

- XY placing stage supporting waffle, Jedec tray, Gel-Pak
